

Distinction™ Tile Composite Roofing

by Trimline® Building Products

Distinctive roofs for distinguished homes.

Distinction® Tile Composite Roofing from Trimline® Building Products is designed to be the ultimate roofing material for long-term performance, attractive appearance and complete peace of mind for years to come. Distinction Tile offers the authentic look of traditional concrete or clay tiles in double roman profile.

Natural Splendor

Distinction Tile Composite Roofing is carefully designed to create unmatched beauty with long-term performance. Our six rich tile colors create an attractive roof, complementing and enhancing any style of home. The colors can be blended for a customized and unique roof appearance.

Proven Performance

Our exclusive formulation and controlled manufacturing process is supported with in-field proven performance and industry testing to give you peace of mind. It has been tested and exceeds minimums for Rate of Burn, Smoke Density, Self and Flash Ignition, Dynamic Wind Resistance at 110 mph*, Uplift Bending, Permeability and Water Absorption.

Light Weight

Distinction Tile's lightweight design makes installation much less challenging and quicker than installing the heavy and delicate natural products. Distinction Tile is a third the weight of concrete and clay tiles (only 305 pounds per roofing square). This means Distinction Tile can be installed on existing homes without expensive structural roof modifications. This is also a great choice for new homes because the lightweight composition can save on roof and truss details while still achieving the desired look of natural products.

Effortless Installation

Distinction Tile is easy to handle and can be cut, drilled and fastened with standard roofing tools for quicker and easier installation even on a variety of pitches and exposures. Distinction Tile offers hip/ridge rake, hip starter and metal closures available in matching colors.

• 50-year limited warranty •

Roof features a Distinction Desert Red composite tile.
