Protective solutions for attics, roofs, and walls.

Ventilation products specifically designed to combat the elements of heat, moisture and Mother Nature in your attic while maintaining a clean and neat architecture on the roof.

Innovative, curb-appealing products engineered to maintain a dry roof deck, long-lasting flashings, and durable composite roofing to protect the most vulnerable areas on a roof.

An unseen line of defense, rainscreen products designed to keep walls dry and prevent trapped moisture from accumulating behind cladding - keeping mold and pests away and siding beautiful.

ATTIC PROTECTION

by Quarrix.

YOUR ROOF'S NUMBER ONE JOB IS TO PROTECT YOUR HOME.

Because your roofing ventilation will significantly impact your home's curb appeal and long-term durability, you will want to ensure your ventilation choice is attractive, effectively manages moisture levels, and withstands the elements of Mother Nature.

“A standard household produces up to 6 gallons of incidental moisture daily.”

– USDA

- › **Attic ventilation**
- › **Prevent mold**
- › **Energy savings**

A roof ventilation system that will mitigate moisture is the best strategy to reduce the damaging effects of moisture. According to the USDA, showers, dishwashers, washing machines, weather, and other sources can accumulate up to six gallons of incidental moisture daily. Moisture absorbed in the air moves upward into the attic through the Stack Effect. Hot air rising carries this moisture into the attic, infiltrating through leaks and upper-level ceiling access points. Even in fully sealed homes that are airtight and watertight, proper attic ventilation is essential to strategically dissipate this moisture. In addition, the heat build-up in the summer and freezing temps in the winter makes the attic become a place that needs more than storage boxes, but your attention and high-quality attic ventilation.

If overlooked or improperly installed, that hot, moist air isn't diffused and gets trapped inside your home, causing damage to the roof structure and contents of your attic by fostering mold and mildew. That's not all – that heat and cold can cause shingles to curl, dangerous ice dams to form, and algae to grow on the roof deck leading to high energy bills and home repair costs.

Attic Protection by Quarrix products are engineered to effectively allow moisture to escape through the roof, help balance attic temperatures, withstand the outdoor elements, and provide an aesthetically pleasing appearance.

Quarrix. The best choice in attic ventilation.

Historically, home builders have addressed the need for ventilation by equipping residential attics with individually installed static vents such as box vents, slant back, turbine vents, depending on your region. The problem is that these varieties of vents are intermittently installed and often cause large pockets of moist air to accumulate in attics.

Today, Quarrix ridge vents are installed at the highest point of the roof, provide continuous ventilation across the top, and are nearly invisible underneath the roof covering. Offering better style and performance, almost 6 million homeowners have already benefited from choosing Quarrix - the industry leader for the highest quality brand of ridge ventilation.

STATIC VENTS

Attic ventilation made easy.

Choose the high-quality ridge vent that’s right for your climate, roof type, or preferred installation method. All are backed with an industry-leading warranty and made in the USA.

TOUGH ENOUGH TO WITHSTAND THE OUTDOOR ELEMENTS

Because the Americas can be a cornucopia of climates, carefully selecting products with the features most suited to your environment will make a significant difference in how well those products perform against the elements, how long they last, and the value of your investment.

“The roof is the most frequently replaced or repaired item on a home.” - IBHS

- › **Prevent leaks**
- › **Maintain a dry roof deck**
- › **Avert insurance claims**

Fierce snowstorms and intense summer sun can damage roofs and create major headaches for homeowners and contractors. When a nor'easter hits or temperatures hit the 90s, this is great for people who love skiing and hitting the beach, but it's not so great for your roof.

Unfortunately, the threats to your roof don't end with the weather. More minor threats like raccoons and squirrels can wreak havoc on a home because they are attracted to dry openings and exposed pipes on your roof. They will often gnaw on these exposed pipe flashings, causing unseen damage that leads to troublesome roof leaks.

When choosing roofing materials, it's all about finding durable products that are tough enough to take on everything from hail storms to damaging UV rays to squirrels. Roof Protection by Quarrix products are engineered to handle all these scenarios and more, so your investment is protected and stays beautiful for decades to come.

WALL PROTECTION

by Quarrix.

WALLS THAT BREATHE WITH YOU

Thanks to innovative engineering and water-resistant materials, walls can be healthier and last longer than ever. Allowing space for water to escape and air to get in keeps walls dry and homeowners happy.

“Wood is hygroscopic, meaning it is a material that absorbs moisture.”

› **Release moisture**

› **Prevent rot**

› **Deter pests**

Water is the leading catalyst for wall damage inside and outside your home. This lingering moisture sticks around like an overstayed house guest because it's trapped behind the cladding and a multitude of wall layers. After a while, the trapped moisture molds, mildews, and becomes a tracking device for termites and pests. Disguised behind the siding, this goes unnoticed while wreaking havoc with rot and causing significant wall damage.

Think back to when you last spilled water on the floor. A relatively small amount of liquid spreads into a larger mass on the floor. Then relief and astonishment when a small paper towel soaks it all up—poof gone!

Unfortunately, that scenario plays repeatedly behind most homes' walls due to rainstorms, snow, ice, clogged gutters, and more. The capillary action keeps the water tracking along surfaces until it finds its way into the wall. If moisture is unable to find an escape, it sits and waits.

Your best protection is to create a system that includes a water-resistant barrier and an air space for water to find its way out. Wall Protection by Quarrix products are non-absorbing and create the right amount of air space for moisture to escape and air to get in, ensuring your walls remain dry, a beautiful exterior, and a healthy home.

ProTect. The best choice for staying dry.

ProTect Drain Mat and ProTect Furring Strips are excellent choices for creating a superior rainscreen system. By providing a drainage plane and air cavity behind the cladding, ProTect products help prevent moisture damage from occurring within the walls of the home.

Rainscreen systems made easy.

Choose the rainscreen that is best for your application, installation method, and wall protection needs.
