DID YOU KNOW?
LEAD ATTRACTS WILDLIFE

In the last few decades, great strides have been made to try and eliminate lead from products and our environment. Unfortunately, many roofs have roof jacks or plumbing vent covers installed that contain lead.

"After removing squirrels from a homeowner's attic, I then need to protect the home from future envasions. I found replacing gnawed lead pipe boots with Quarrix's lead-free pipe boots was a faster and cheaper solution over installing cage protectors over the lead alternatives."

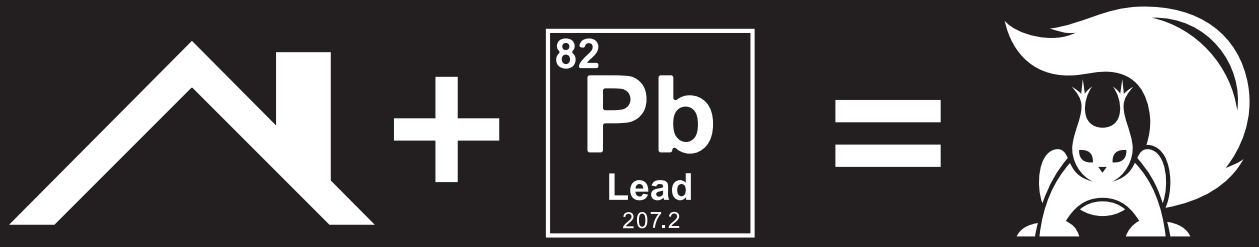
How to Protect Your Home



ROOF + LEAD = SQUIRREL DAMAGE

Roofers agree that homeowners are overly shocked when they discover squirrels were the culprit behind a destroyed roof jack and leaking roof. Scientists don't exactly know why squirrels are attracted to the lead pipe covers or why they can't resist gnawing on them. Despite the reason why, "Once a plumbing vent cap is damaged, water can leak into the attic between the plumbing vent and the cap," says Rueben Saltzman, Home Inspector for StructureTech. The answer to stopping the problem is simple – stop installing lead pipe covers on the roof.

Quarrix

To safeguard your environment, wildlife, and home—
commit to using lead-free roofing products.

Protect Your Home

WITH A LEAD-FREE SOLUTION

LEAD FREE

Quarrix Pipe Boot is 100% steel and will not be damaged by wildlife. The 'Life of the Roof' warranty ensures a beautiful and long-lasting roof.

Weather-resistant to extreme cold, frost, and hot temperatures.

Passed vigorous 110-mph, wind-driven rain test.

Installs over any pipe vent material - PVC, Metal, Cast Iron, and Lead Compatible.
